Summary

CS student specializing in AI/ML with a strong foundation in DSA and full-stack development. Experienced in building user-focused, real-world applications through hackathons, startups, and internships. Passionate about building scalable, high-impact systems and committed to professional growth as a software engineer.

Education

- **Bennett University** — Greater Noida, India
  Bachelor of Technology - Computer Science Engineering; CGPA: 9.22 — *July 2024 - June 2028*

Skills Summary

- **Languages**: Python, C++, Java, JavaScript, SQL
- **AI/ML**: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV
- **Frameworks** : React.js, Next.js, Flask, Tailwind CSS, Bootstrap
- **Tools**: AWS, Git, GitHub, Node, REST APIs, Cloudinary, Supabase, Docker, Android
- **Core Concepts**: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Machine Learning, Deep Learning, Agile Methodologies

Experience

- **TAGO (NFC-Based Smart Card Startup)** — Remote
  Tech Intern — *August 2025 - October 2025*
  - Redesigned the user dashboard and NFC-linked digital profile system, reducing profile setup time and improving onboarding flow for 1000+ active users.
  - Resolved 7+ critical bugs and shipped 4 feature enhancements to the customer portal, improving stability and user experience.
- **SYNIQ (A Car Pooling Startup)** — Remote
  React Native Frontend Developer Intern — *January 2026 - February 2026*
  - Built zero-tap chat initiation on ride acceptance, reducing driver-rider communication friction and increasing in-app message engagement.
  - Enforced version control across Android and iOS, cutting crash reports from outdated builds during the starting phase of release.
  - Shipped 3-layer verification (personal, vehicle, organizational) that reduced fraudulent account attempts.

Research Experience

- **Effectiveness of Data Augmentation Strategies in Medical Imaging** — Team of 2
  Research Project
  - Evaluated 15 data augmentation strategies across ResNet-18, EfficientNet-B3, and ViT-B/16 on a 14-class skin lesion dataset.
  - Achieved **86.21% classification accuracy** using MixUp augmentation and identified AC-GAN as an effective augmentation strategy for Vision Transformers.
  - Co-authored a research paper under preparation.

Projects

- **Breathline (Next.js, MongoDB, Cloudinary)**: Built and deployed a centralized medical records platform featuring patient, doctor, and emergency dashboards with secure role-based access. Enabled licensed doctors to view shared records and ensured instant medical data access during emergencies, improving healthcare reliability and response time.
- **CNN-based Lung Disease Detector (Python, DenseNet121, TensorFlow, Keras)**: Developed a convolutional neural network model trained on chest X-ray datasets containing Normal, Bacterial Pneumonia, Viral Pneumonia, COVID-19, and Tuberculosis images. Achieved high classification accuracy using image preprocessing, feature extraction, and an optimized DenseNet121-based architecture.
- **JanConnect – Civic Issue Reporting Mobile Application (React Native, Supabase, Cloudinary)**: Developed a mobile application enabling citizens to report civic issues with real-time location tagging, media uploads, and status tracking. Integrated a dedicated contractor dashboard within the same application to manage tenders, track assigned issues, and streamline resolution workflows efficiently.

Certifications

- **AWS Certified Cloud Practitioner** — Amazon Web Services
  Credential Verification Link — *2025*

Activities & Achievements

- **Top 10 National Finalist at Productathon** — IIT ROORKEE
  3X National Finalist at IIT Roorkee hackathons, reached final rounds out of 500+ teams pan-India
- **Dean Career Cloud (DCC)** — Bennett University
  Senior Executive Corporate & Alumni Relations Team — *2025 - Present*
- **Technical Communities & Hackathons** — University & National Level
  CodeChef BU Member & 7+ Hackathon Participant — *2024 - 2025*
